

What was your win this week?

Jess Lee May 17 · 1 min read

#discuss #weeklyretro

Looking back on your week -- what was something you're proud of?

All wins count -- big or small

Examples of 'wins' include:

- Getting a promotion!
- Starting a new project
- Fixing a tricky bug
- Cleaning your house...or whatever else that may spark joy 😊

...

I noticed that Code Cooperative worked for with former inmates vs with me in working in these inmates in the actual prisons, then after we put them in an actual job doing this stuff. Some have 2-5 -10 years left on their sentence, Some having life sentences and others in between, but everyday they thank me for being here and teaching them what i know.

The progress these men and women are making is amazing, I worked with a guy last week that didn't know how to use a computer, so i had to explain you know how to use a shift key and scrolling with the mouse, then i left him alone and came back late and he made huge progresses.

This work is extremely fulfilling but it shard still trying to not let my internal bipolar/depression issues Dictate my actions on a daily basis, but its getting better with medications and exercise, but I feel still like i need help in that area.... if anyone has a decent they could recommend to me that would be great,

I'm gonna see if i can find Alex Qins contact info, i have a few questions maybe she should shed some light on...

This week I submitted to not one, but two conference talks! One to ElixirConf and one to RubyConf.

These would be my first time(s) submitting a CFP, and it's quite a mental hurdle to overcome and decide to submit. There's always that slight doubt lingering at the back of my mind (you'll never get accepted!), but this time I've decided to just do it anyway :)

Also, I've recently been trying to speak more at meetups too, so hopefully everything works out and that my talks get accepted!

It may not seem like much, but this one CLI snippet has made my day! (...and spares me from the tedium of doing a hundred screen grabs by hand.)

```
for k in scene*.swf; \
do gnash --screenshot last \
--screenshot-file ./lastframe/$k.png -1 -r1 $k; \
done
```

Long story short: A Flash-based educational tutorial circa 2004 is getting overhauled for future longevity. However the source files were lost years ago, so I'm left to tease media assets from rendered *.swf scenes piecemeal.

Bradley Collins

May 17 ■■■

I went a whole week without missing a day of coding! A huge win for me as I usually get demotivated a few days in. This time around things are finally clicking so it's been much easier to stick with the plan!

■■■

This week I had the honor and incredible opportunity to join the Ionic team for their last podcast episode, still crazy to me 😊

dev.to/daviddalbusco/podcast-pwas-...

On the other side, I still have a couple of bugs to solve and I spilled full glass of water and cups of tea on the flour at least three times 🤣
